

A digital camera is disclosed for capturing digital images and organizing the captured images for subsequent transfer from the digital camera to an external device that utilizes the digital images. The digital camera includes a database having a plurality of customized profiles, wherein each customized profile contains a plurality of image utilization fields. A user selects one of the plurality of customized profiles from the database. The digital camera further includes a structure for defining a plurality of profile indices respectively corresponding to ones of the plurality of customized profiles, and an image sensor for capturing images. A profile index is associated with at least one captured image to identify the corresponding selected customized profile. The digital camera further includes a memory for receiving and storing the at least one captured image and the corresponding profile index.
